## Industry Standard Sizes

For women, the industry-standard bracelet diameter is 7 inches/17.7cm; for men, the standard is 8 inches/20.32cm.

## 'Find your bracelet size and fit for the best look

In general, we can divide bracelet fits into **snug, comfortable and loose**. The general rule of thumb to get your best fit is to add the following to your measured wrist size and then choose the next size from the brand's size chart.

If you like to wear your bracelet snug around your wrist, you like it quite tight. **Choose the size closest to your wrist measure** from the size chart. This is the right size for leather or cord bracelets that are styled to be worn snugly.

If you want a comfortable fit with enough room to pass a little finger all around, then you should **go for the next bigger size range** on the size chart. Best for charm, gemstone or chain bracelets.

## Bracelet sizes and your perfect size

<b>FIT</b>	<b>Your wrist measurement (CM)</b>	<b>Your wrist measurement (INCHES")</b>
Snug Fit	+ 0.5 - 1cm	+ 0.25 - 0.5"
Comfort Fit	+ 2 - 2.5cm	+ 0.75 - 1"
Loose Fit	+ 3cm	+ 1.25"

Bracelet size charts show the total bracelet circumference lengths measured in either centimetres or inches (1" = 2.5 cm). The first thing to consider is the fit or the tightness of the bracelet. Give some thought to the snugness or looseness you desire. There are two easy ways to measure your wrist to find your bracelet size (total circumference).
